12a. DISTRIBUTION / AVAILABILITY STATEMENT Approved for public release; distribution is unlimited			12b. DISTRIBUTION CODE	
13. ABSTRACT (Maximum 200 words) Site Inspection Report, 102nd Air Control Squadron, North Smithfield Air National Guard Station, Slatersville, Rhode Island, Volume III of III. This is the third volume of a three volume site inspection report. Three areas of concern (AOCs) were investigated under the Installation Restoration Program. A passive soil gas survey was conducted of the entire station. Soil and groundwater samples were collected and analyzed. Low level contamination of fuel-related compounds were detected below state action levels. No further action was recommended.				
14. SUBJECT TERMS Installation Restoration Program; Comprehensive Environmental Response, Compensation and Liability Act (CERCLA); Air National Guard; Site Inspection, Rhode Island Air National Guard; Slatersville, Rhode Island			15. NUMBER OF PAGES	
16. PRICE CODE C999				
17. LIMITATION OF REPORT Unclassified	18. LIMITATION OF THIS PAGE Unclassified	19. SECURITY CLASSIFICATION OF ABSTRACT Unclassified	20. LIMITATION OF ABSTRACT None	

GENERAL INSTRUCTIONS FOR COMPLETING SF 298

The Report Documentation Page (RDP) is used in announcing and cataloging reports. It is important that this information be consistent with the rest of the report, particularly the cover and title page. Instructions for filling in each block of the form follow. It is important to *stay within the lines* to meet optical scanning requirements.

Block 1. Agency Use Only (Leave blank).

Block 2. Report Date. Full publication date including day, month, and year, if available (e.g. 1 Jan 88). Must cite at least the year.

Block 3. Type of Report and Dates Covered. State whether report is interim, final, etc. If applicable, enter inclusive report dates (e.g. 10 Jun 87 - 30 Jun 88).

Block 4. Title and Subtitle. A title is taken from the part of the report that provides the most meaningful and complete information. When a report is prepared in more than one volume, repeat the primary title, add volume number, and include subtitle for the specific volume. On classified documents enter the title classification in parentheses.

Block 5. Funding Numbers. To include contract and grant numbers; may include program element number(s), project number(s), task number(s), and work unit number(s). Use the following labels:

C - Contract	PR - Project
G - Grant	TA - Task
PE - Program Element	WU - Work Unit Accession No.

Block 6. Author(s). Name(s) of person(s) responsible for writing the report, performing the research, or credited with the content of the report. If editor or compiler, this should follow the name(s).

Block 7. Performing Organization Name(s) and Address(es). Self-explanatory.

Block 8. Performing Organization Report Number. Enter the unique alphanumeric report number(s) assigned by the organization performing the report.

Block 9. Sponsoring/Monitoring Agency Name(s) and Address(es). Self-explanatory.

Block 10. Sponsoring/Monitoring Agency Report Number. (If known)

Block 11. Supplementary Notes. Enter information not included elsewhere such as: Prepared in cooperation with...; Trans. of...; To be published in.... When a report is revised, include a statement whether the new report supersedes or supplements the older report.

Block 12a. Distribution/Availability Statement. Denotes public availability or limitations. Cite any availability to the public. Enter additional limitations or special markings in all capitals (e.g. NOFORN, REL, ITAR).

DOD - See DoDD 5230.24, "Distribution Statements on Technical Documents."
DOE - See authorities.
NASA - See Handbook NHB 2200.2.
NTIS - Leave blank.

Block 12b. Distribution Code.

DOD - Leave blank.
DOE - Enter DOE distribution categories from the Standard Distribution for Unclassified Scientific and Technical Reports.
NASA - Leave blank.
NTIS - Leave blank.

Block 13. Abstract. Include a brief (*Maximum 200 words*) factual summary of the most significant information contained in the report.

Block 14. Subject Terms. Keywords or phrases identifying major subjects in the report.

Block 15. Number of Pages. Enter the total number of pages.

Block 16. Price Code. Enter appropriate price code (*NTIS only*).

Blocks 17. - 19. Security Classifications. Self-explanatory. Enter U.S. Security Classification in accordance with U.S. Security Regulations (i.e., UNCLASSIFIED). If form contains classified information, stamp classification on the top and bottom of the page.

Block 20. Limitation of Abstract. This block must be completed to assign a limitation to the abstract. Enter either UL (unlimited) or SAR (same as report). An entry in this block is necessary if the abstract is to be limited. If blank, the abstract is assumed to be unlimited.

Notes:

NR - This surrogate standard is Not Required. Other versions of this test method may use this surrogate standard.

DIL - This surrogate standard was diluted to below detectable levels due to concentrations of analytes in this sample.

Complete Surrogate Standard Names Listed by Analysis:

Pesticide Surrogate Standards:

Decachl = Decachlorobiphenyl

Dibutyl = Dibutylchloroendate

Tetrach = Tetrachloro-m-xylene

Volatile Surrogate Standards:

Bromofl = Bromofluorobenzene

1,2-Dichl = 1,2-Dichloroethane-d4

Toluene = Toluene-d8

Drinking Water Method 524 1,2-Dichl = 1,2-Dichlorobenzene-d4

Semivolatile Surrogate Standards:

2-Fluor (1st) = 2-Fluorobiphenyl

Phenol- = Phenol-d6

2,4,6-T = 2,4,6-Tribromophenol

2-Fluor (2nd) = 2-Fluorophenol

Nitrobe = Nitrobenzene-d5

p-Terph = p-Terphenyl

Herbicides Surrogate Standard:

2,4-Dic = 2,4-Dichlorophenyl acetic acid

Petroleum Hydrocarbon Fingerprint Surrogate Standard:

2-Fluor = 2-Fluorobiphenyl

para-Te = para-Terphenyl

Gasoline Range Organics	5400	ug/Kg	12/14/1994		3	gah

Notes on Petroleum Hydrocarbon analysis (EPA 8015):

This sample is contaminated with non-petroleum compounds. There is also heavyweight petroleum present that is outside the gasoline range of petroleum compounds.

Notes:

NR - This surrogate standard is Not Required. Other versions of this test method may use this surrogate standard.
 Dil - This surrogate standard was diluted to below detectable levels due to concentrations of analytes in this sample.

Complete Surrogate Standard Names Listed by Analysis:

Pesticide Surrogate Standards:

Decachl = Decachlorobiphenyl

Dibutyl = Dibutylchloroendate

Tetrach = Tetrachloro-m-xylene

Volatile Surrogate Standards:

Bromofl = Bromofluorobenzene

1,2-Dichl = 1,2-Dichloroethane-d4

Toluene = Toluene-d8

Drinking Water Method 524 1,2-Dichl = 1,2-Dichlorobenzene-d4

Semivolatile Surrogate Standards:

2-Fluor (1st) = 2-Fluorobiphenyl

Phenol- = Phenol-d6

2,4,6-T = 2,4,6-Tribromophenol

2-Fluor (2nd) = 2-Fluorophenol

Nitrobe = Nitrobenzene-d5

p-Terph = p-Terphenyl

Herbicides Surrogate Standard:

2,4-Dic = 2,4-Dichlorophenyl acetic acid

Petroleum Hydrocarbon Fingerprint Surrogate Standard:

2-Fluor = 2-Fluorobiphenyl

para-Te = para-Terphenyl

Notes:

NR - This surrogate standard is Not Required. Other versions of this test method may use this surrogate standard.

Dil - This surrogate standard was diluted to below detectable levels due to concentrations of analytes in this sample.

Complete Surrogate Standard Names Listed by Analysis:

Pesticide Surrogate Standards:

Decachl = Decachlorobiphenyl

Dibutyl = Dibutylchloroendate

Tetrach = Tetrachloro-m-xylene

Volatile Surrogate Standards:

Bromofl = Bromofluorobenzene

1,2-Dichl = 1,2-Dichloroethane-d4

Toluene = Toluene-d8

Drinking Water Method 524 1,2-Dichl = 1,2-Dichlorobenzene-d4

Semivolatile Surrogate Standards:

2-Fluor (1st) = 2-Fluorobiphenyl

Phenol- = Phenol-d6

2,4,6-T = 2,4,6-Tribromophenol

2-Fluor (2nd) = 2-Fluorophenol

Nitrobe = Nitrobenzene-d5

p-Terph = p-Terphenyl

Herbicides Surrogate Standard:

2,4-Dic = 2,4-Dichlorophenyl acetic acid

Mineral Hydrocarbon Fingerprinting Surrogate Standard:

2-Fluor = 2-Fluorobiphenyl

para-Te = para-Terphenyl

Notes:

NR - This surrogate standard is Not Required. Other versions of this test method may use this surrogate standard.

Dil - This surrogate standard was diluted to below detectable levels due to concentrations of analytes in this sample.

Complete Surrogate Standard Names Listed by Analysis:

Pesticide Surrogate Standards:

Decachl = Decachlorobiphenyl

Dibutyl = Dibutylchloroendate

Tetrach = Tetrachloro-m-xylene

Volatile Surrogate Standards:

Bromofl = Bromofluorobenzene

1,2-Dichl = 1,2-Dichloroethane-d4

Toluene = Toluene-d8

Drinking Water Method 524 1,2-Dichl = 1,2-Dichlorobenzene-d4

Semivolatile Surrogate Standards:

2-Fluor (1st) = 2-Fluorobiphenyl

Phenol- = Phenol-d6

2,4,6-T = 2,4,6-Trisbromophenol

2-Fluor (2nd) = 2-Fluorophenol

Nitrobe = Nitrobenzene-d5

p-Terph = p-Terphenyl

Herbicides Surrogate Standards:

2,4-Dic = 2,4-Dichlorophenyl acetic acid

Petroleum Hydrocarbon Fingerprint Surrogate Standards:

2-Fluor = 2-Fluorobiphenyl

para-Te = para-Terphenyl

Notes:

NR - This surrogate standard is Not Required. Other versions of this test method may use this surrogate standard.

Dil - This surrogate standard was diluted to below detectable levels due to concentrations of analytes in this sample.

Complete Surrogate Standard Names Listed by Analysis:

Pesticide Surrogate Standards:

Decachl = Decachlorobiphenyl

Dibutyl = Dibutylchloroendate

Tetrach = Tetrachloro-m-xylene

Volatile Surrogate Standards:

Bromofl = Bromofluorobenzene

1,2-Dichl = 1,2-Dichloroethane-d4

Toluene = Toluene-d8

Drinking Water Method 524 1,2-Dichl = 1,2-Dichlorobenzene-d4

Semivolatile Surrogate Standards:

2-Fluor (1st) = 2-Fluorobiphenyl

Phenol- = Phenol-d6

2,4,6-T = 2,4,6-Tribromophenol

2-Fluor (2nd) = 2-Fluorophenol

Nitrobe = Nitrobenzene-d5

p-Terph = p-Terphenyl

Herbicides Surrogate Standard:

2,4-Dic = 2,4-Dichlorophenyl acetic acid

Petroleum Hydrocarbon Fingerprint Surrogate Standard:

2-Fluor = 2-Fluorobiphenyl

para-Te = para-Terphenyl

FIELD CHANGE REQUEST FORMS

ANEPTEK CORPORATION

FIELD CHANGE REQUEST FORM

Site Name: North Smithfield ANG Station

Location: Slatersville, RI

Contract No.: DAHA90-93-D-0003

Delivery Order No.: 0003

The following change(s) to the field program are requested:

- 1) Install 5-foot monitoring well screens instead of 10-foot monitoring well screens.
- 2) Do not install a monitoring well at AOC C.

Reasons:

- 1) Due to shallow depth to bedrock in most areas of the Station, installation of 10-foot well screens was not possible. After receiving verbal approval from ANGRC, over the telephone, 5-foot well screens were installed.
- 2) During the advancement of soil boring SB-03 to bedrock, at the proposed location of the monitoring well to be installed at AOC C, it was noted that there was no groundwater in the borehole. The hollow stem augers were then pulled up approximately 0.5 feet, capped, and allowed to remain in the borehole overnight. After more than 23 hours, the borehole was again checked for the presence of groundwater and none was found. After receiving verbal approval from ANGRC, over the telephone, the augers were removed and the borehole was grouted to the ground surface.

FIELD CHANGE REQUEST FORM

Site Name: North Smithfield ANG Station

Location: Slatersville, RI

Contract No.: DAHA90-93-D-0003

Delivery Order No.: 0003

The following change(s) to the field program are requested:

- 1) Alter the monitoring well construction specifications for wells MW-02, MW-03, and MW-04. The thickness of each layer of material between the well screen and the ground surface was reduced. Revised well construction specifications include:
 - 0 to 1.0 foot below grade - flush-mount road box (MW-02) or protective metal casing (MW-03 and MW-04);
 - 1.0 to 2.0 feet below grade - bentonite seal surrounding PVC riser pipe;
 - 2.0 to 2.5 feet below grade - fine sand layer surrounding PVC riser pipe;
 - 2.5 to 7.5 feet below grade - coarse sand pack surrounding well screen; and
 - 7.5 to 8.5 feet below grade - coarse sand layer.

Reasons:

- 1) At each of these locations, groundwater was encountered at approximately 2.5 to 3.5 feet below ground surface. Alterations were required to allow construction of a well in which the screened interval intersected the groundwater table.

Site Name: North Smithfield ANG Station

Location: Slatersville, RI

Contract No.: DAHA90-93-D-0003

Delivery Order No.: 0003

The following change(s) to the field program are requested:

- 1) Soil boring SB-09 relocated approximately 70 feet north of its originally proposed location.
- 2) Soil boring SB-11 relocated approximately 30 feet south of its originally proposed location.
- 3) Soil boring SB-12 relocated approximately 30 feet southwest of its originally proposed location.

Reasons:

- 1) All three soil boring locations were relocated due to the potential presence of underground utilities in the vicinity of their originally proposed locations.

APPENDIX G

**DATA REQUIREMENTS FOR
FEDERAL FACILITY DOCKET SITES**

PRELIMINARY ASSESSMENT/SITE INSPECTION
DATA REQUIREMENTS FOR FEDERAL FACILITY DOCKET SITES

1. **Supply copies of all sampling data, on-site and off-site, including location map, detection limits (see definitions below), raw data sheets, QA/QC documents, date(s) sampled, analytical method(s) used, well or boring logs, and sampling technique(s).**

All sampling data generated from the on-site GC and the off-site laboratory are presented in Appendices E and B, respectively. Sample locations are provided on the figures in the body of the SI report. Boring and well logs are presented in Appendix C.

2. **Locate and identify on a map all known or suspected sources (see definition below). Supply all information about source(s) such as: dates of operation, use, or spillage; amounts of material deposited, stored, or spilled; dimensions of source(s); known or suspected hazardous substances (see definition below), etc.**

Figure G-1 depicts the locations of the three identified AOCs. All other requested information is presented below.

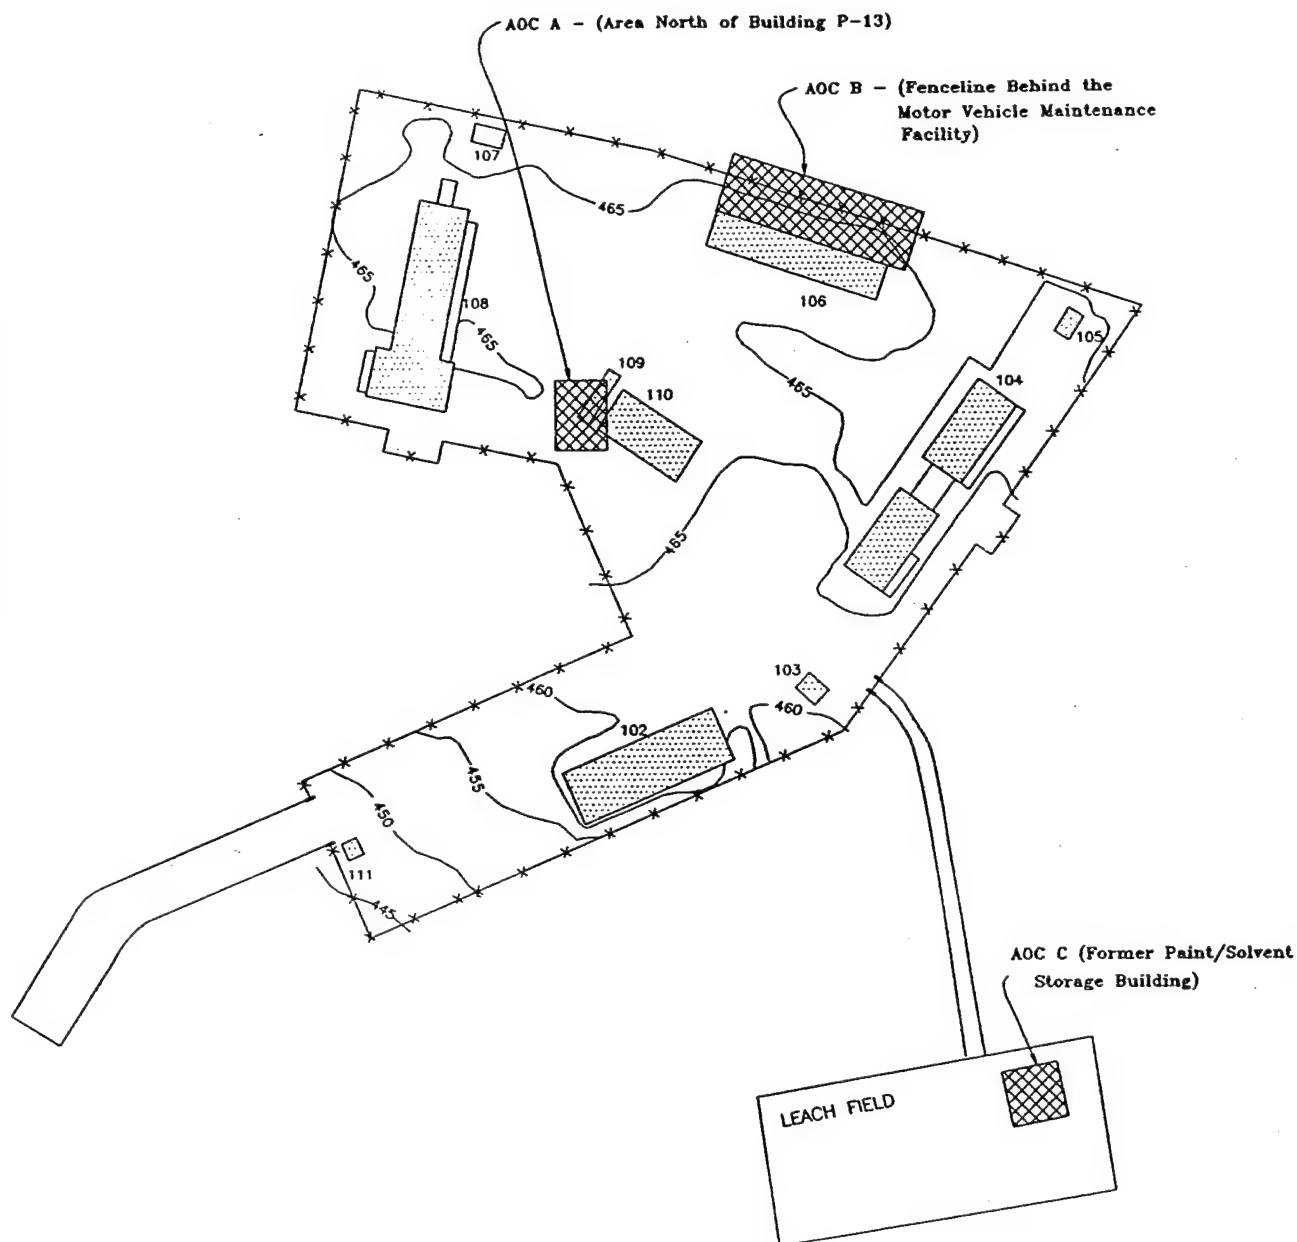

AOC-A Area North of Building P-13

AOC-A is located in the north-central area of the Station, north of former Building P-13. This area is the approximate former location of Building P-4. Building P-4 housed four generators that were used to supplement electrical power to radar units operating at the Station. There is no available information on the construction of Building P-4, except that the generators were located on a concrete slab floor. Building P-4 was torn down during the Station's construction and consolidation phase. The area is currently clear and unpaved.

AOC-A Background and Operational History

From 1978 through 1992, generators located behind Building P-13, the AGE Maintenance Building, were used to supplement electrical power for radar units operating at the Station. The generators were known to leak small amounts of diesel fuel while running and jerry cans were used to collect the spillage. Occasionally these cans overflowed due to lack of maintenance or rapid accumulation of rain water. An estimate of one gallon per year is believed to have been spilled in this area for a total of 14 gallons over the 14-year operating period.

During the Station's construction and consolidation phase, two areas of soil contamination were found in the vicinity of this AOC, during the construction of Building 108, the Communications/Electronics Training Facility. It was determined that this contamination was related to a set of generators and a fuel distribution line not associated with the generators addressed in this SI (AEPCO, 1993). RIDEM requested clean-up

and Process Technologies

of all contaminated soil above 100 parts per million (ppm) of total petroleum hydrocarbons (TPH). Trow Protze Consulting Engineers completed a site assessment in July of 1992. The Station removed contaminated soil originating from the footings of the foundation of Building 108 in June 1994.

AOC-B Fenceline behind the Motor Vehicle Maintenance Facility

The current Motor Vehicle Maintenance Facility, Building 106, was also the Motor Vehicle Maintenance Facility prior to the new construction, and was designated Building P-11 (AEPCO, 1993). The Motor Vehicle Maintenance Facility is located on the northeastern side of the Station and is a one-story building with a number of bays to service vehicles. The fenceline is located approximately 30 feet east of and parallel to the Motor Vehicle Maintenance Facility.

AOC-B Background and Operational History

From 1972 to 1978, paint thinners were used at Building 106 in cleaning paint equipment. Sources indicate that toluene was used as the primary thinner. Based on interviews with Army and Air National Guardsmen, historical discharge of solvents and/or paints was conducted along the fenceline located behind the Motor Vehicle Maintenance Facility. Based on available information, an estimated one gallon per year was discharged to the ground surface over a 5-year period. A maximum total volume of 25 gallons may have been dumped at this site.

AOC-C Former Paint/Solvent Storage Building

The Former Paint/Solvent Storage Building was previously located at the site of the currently used leach field, in the southern area of the station. Although there are no visible remains of the building, the building was reportedly situated in the eastern portion of the leach field, based on available information. Access to this area is down a small paved road. This area is approximately 20-30 feet below the Station proper in elevation.

AOC-C Background and Operational History

The Former Paint/Solvent Storage Building was used to store paints and solvents. Sources have indicated that from 1972 to 1974 small amounts of paint thinners were dumped next to the building. Based on available information, an estimated one gallon per year may have been spilled over a 5-year period, and a maximum total volume of 25 gallons may have been spilled.

3. **Provide a description of all aquifers beneath the site, including description of overlying materials, depth first encountered, thickness, and composition.**

The Station is underlain by an unsorted till overburden and bedrock aquifers. The

bedrock aquifer is regionally extensive, though transmissivity of the bedrock is low. The depth to groundwater in the bedrock aquifer is highly variable due to the unpredictability of the fractures and joints where groundwater occurs. Two bedrock wells (wells Nos. 1 and 2), approximately 700 feet deep, were drilled at the site. However, these wells are not used for drinking water because trichloroethane and trichloroethene were detected in water samples taken in 1984 (AEPCO, 1993). Domestic supplies can be obtained from the bedrock aquifer at yields of 1 to 100 gallons per minute. The unsorted till aquifer is not generally utilized due to the small and unreliable yields (generally 2 gallons per minute). Depth to water varied throughout the site from 3.5 feet to 14.5 feet (Aneptek, 1994b). The material overlying the site is classified as Paxton-Urban land complex (AEPCO, 1993). The complex consists of well drained Paxton soils and areas of urban land. Urban land consists of areas covered by parking lots, buildings, and other structures. The top five inches of the Paxton soils is dark grayish brown fine sandy loam. The subsoil, from 5 to 23 inches, is light brownish gray, yellowish brown and grayish brown fine sandy loam.

4. For each source, choose one description from Table 1 that describes the groundwater containment. Provide complete documentation (i.e. engineering diagrams, photographs (originals) as to why the source meets that description and not any other in the Table.

<u>Source</u>	<u>Groundwater Containment Description (from Table 1)</u>
AOC A	No liner.
AOC B	No liner.
AOC C	No liner.

There are no containment structures present to control groundwater flow at any of the AOC's. There are no engineering diagrams available. Photographs of each AOC are available in the project file.

5. Provide the location of all drinking water wells in all aquifers beneath the site in a 4 mile radius from the site (property boundary) by HRS distance ring and locate the wells within a one mile radius on a 7.5 minute topographical map. Provide information on depth of well(s), screening interval(s), depth of aquifer(s) encountered, and population served. For multiple wells (i.e. municipal system) provide the number of wells, location of all wells (regardless of 4 mile limit), average annual pumpage of each well (regardless of 4 mile limit), and total population served by system. Include information on all standby wells.

Location of all drinking water wells within a 4 mile radius from the site are shown in Figure G-2 (AEPCO, 1993). Telephone interviews (Aneptek, 1995 c-g) were conducted to confirm the validity of the results obtained from the Preliminary Assessment (AEPCO, 1993). Information on individual well construction and characteristics are presented in Table G-1 (AEPCO, 1993).

6. **Provide information and location (on 7.5 minute topographical map) of wells within 4 miles that are used to irrigate 5 or more acres of commercial food or forage crops, or watering of commercial livestock, or ingredient in commercial food preparation, or supply for aquaculture, or supply for a major or designated water recreation area, excluding drinking water use.**

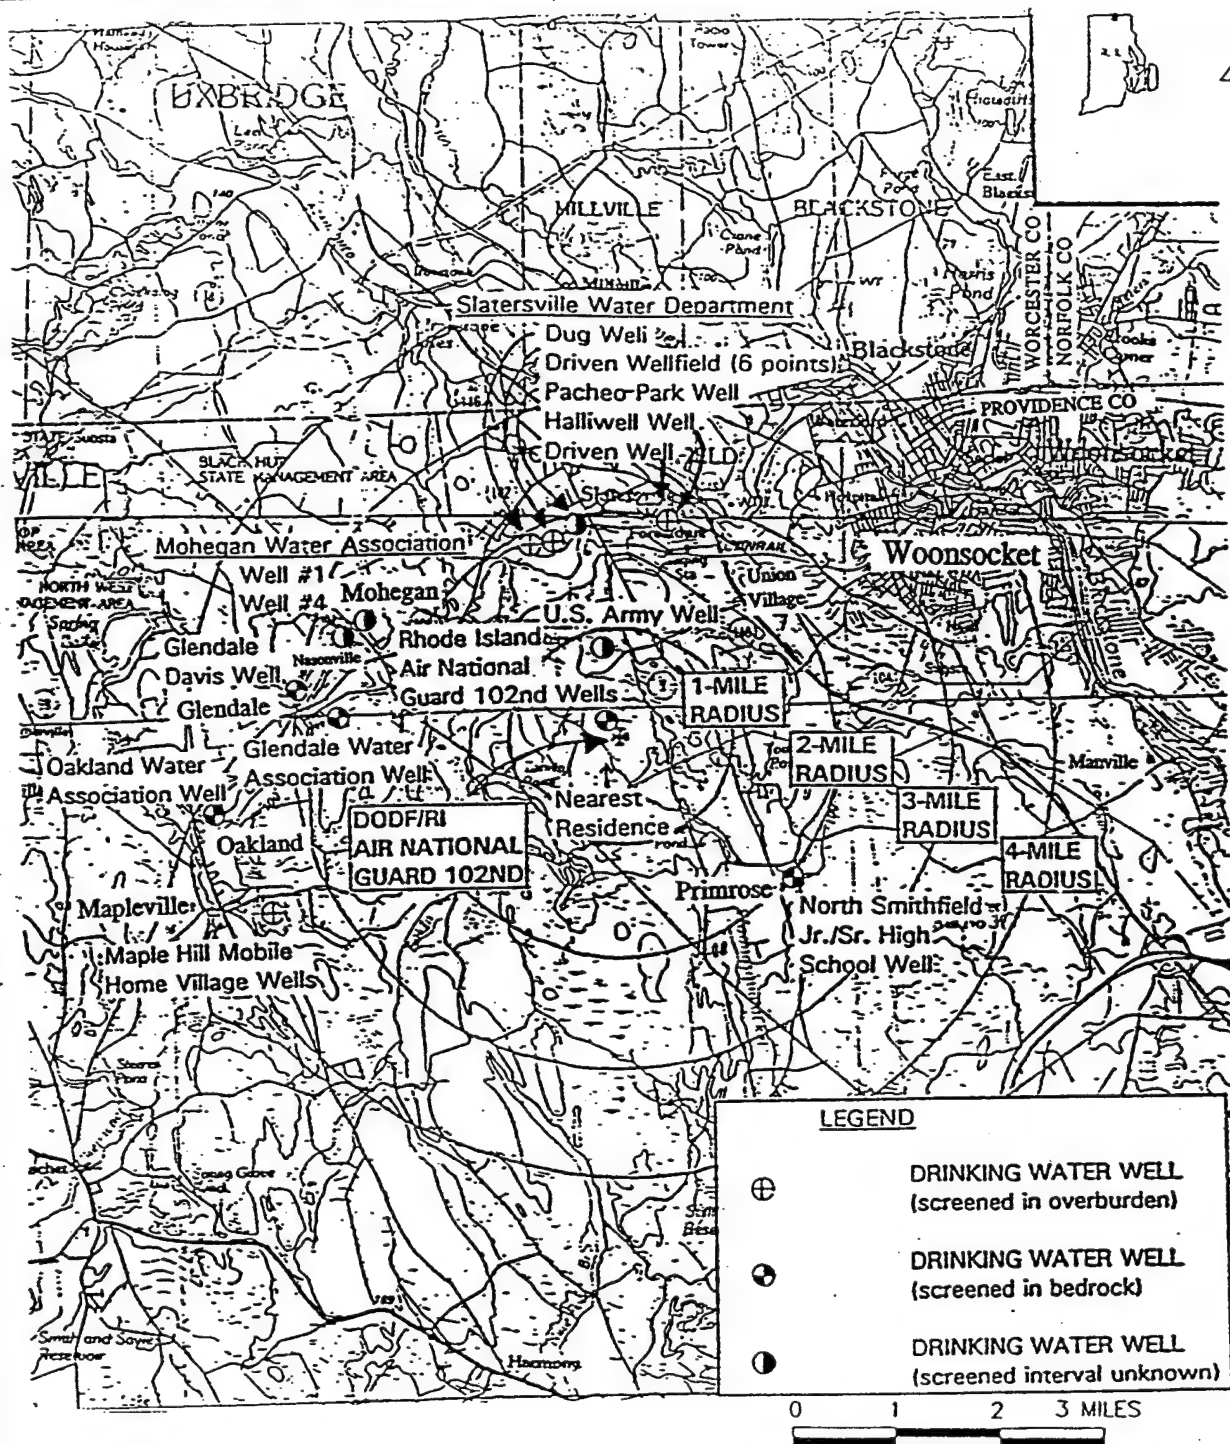

Based on discussions with local town officials there were no wells found within a 4 mile radius of the Site that are used strictly for irrigation of 5 or more acres of commercial food or forage crops, watering of commercial livestock, as an ingredient in commercial food preparation, as a supply for aquaculture or as a supply for a major or designated water recreation area. Water which is used for the above mentioned purposes is obtained from public or private wells. (Aneptek, 1995 c-g).

7. **What is the average number of persons per residence for county (or counties) that site is located in per the US Census Bureau?**

The average number of persons per residence for Providence County is 2.53. Information was obtained through telephone interviews (Aneptek, 1995h) and based on 1990 US Census data.

8. **Identify and locate all surface water bodies within 2 miles of site marking off the drainage routes (shown on 7.5 minute topographical map) from each source to applicable surface water bodies. Provide the average annual cubic feet per second flow for each surface water body within 15 miles downriver or radius from the point of probable entry into surface water. For lakes, provide information on inflow and outflow.**

A list of surface water bodies within 2 miles of the Site as identified on a United States Geological Survey (USGS) 7.5 minute topographic map for the Georgiaville Quadrangle, Providence County, RI follows:

BASE MAP IS A PORTION OF THE FOLLOWING U.S.G.S. 30 X 60 MINUTE SERIES MAPS:

<u>Rivers and Streams</u>	<u>Distance</u>
1. Trout Brook	0.53 miles north
2. Tarkiln Pond	0.97 miles south
3. Tarkiln Brook	1.2 miles south west
4. Nichols Pond	1.7 miles south west
5. Rankiln Brook	1.2 miles south west
6. Lake Bel Air	1.1 miles south west
7. Woonasquatuck River	1.7 miles south east
8. Todds Pond	1.8 miles south east
9. Cedar Swamp	1.6 miles east
10. Branch River	1.8 miles north east
11. Branch River	1.9 miles north west
12. Slatersville Reservoir	1.5 miles north west

Figure G-3, shows the drainage routes from the Rhode Island ANG Station into the applicable surface water bodies.

Average flow for each river/stream identified within the fifteen mile downstream pathway are as follows:

<u>River/Stream</u>	<u>Annual Flow</u>
1. Branch River	174 (ft ³ /sec.)
2. Woonasquatucket River	73 (ft ³ /sec.)
3. Blackstone River	774 (ft ³ /sec.)

(Reference: Aneptek, 1995g)

9. For each source, choose one description from Table 2 that describes the surface water containment. Provide complete documentation (i.e. engineering diagrams, photographs (originals) as to why the source meets that description and not any other in the Table.

<u>Source</u>	<u>Surface Water Containment Description (from Table 2)</u>
AOC A	No Evidence of hazardous substance migration from source area. (b-a2): functioning and maintained run-on control system and runoff management system.
AOC B	No evidence of hazardous substance migration from source area (a).

SCALE 1:24000

LEGEND

**NORTH SMITHFIELD ANG'S
SURFACE DRAINAGE PATHWAYS**
102ND AIR CONTROL SQUADRON
SLATERSVILLE, RHODE ISLAND

**ANEPTK
CORPORATION**
Analytic, Environmental
and Process Technologies

AOC C No Evidence of hazardous substance migration from source area (a).

10. What is the number of acres in each drainage basin?

The acreage of each drainage basin of consequences as follows:

<u>Drainage Basin</u>	<u>Area/Acreage</u>
Blackstone River	416 sq. miles (266,240 acres)
Branch River	91 sq. miles (58,240 acres)
Woonasquatucket River	38 sq. miles (24,320 acres)

(Reference: Aneptek, 1995h).

11. From Table 3, choose the predominant soil group (surface soil) which comprises the largest total area within each drainage area.

The predominant surface soil group (from Table 3) which comprises the largest total area within the Branch River, Blackstone River, and Woonasquatucket River drainage basins are moderately fine textured soils with low infiltration rates. (USGS, 1953).

12. What is the 2 year, 24 hour rainfall?

The 2 year, 24 hour rainfall is approximately 3.4 inches (U.S.DOC, 1961).

13. From Table 4, choose the floodplain category for each source (supply FEMA floodplain map) and determine if each source meets the criteria from Table 5 (engineer's certification).

The floodplain category for each of the identified sources has been identified on the Federal Emergency Management Agency [FEMA] Flood Insurance Rate Maps (FIRM), revised December 3, 1993, as Zone X, which is determined to be outside the limits of the 500-year floodplain. No documentation that containment at each source is designed, constructed, operated, and maintained to prevent a washout of hazardous substances by a flood outside the 500-year flood limits was provided to Aneptek or located during this study.

14. Provide the location of all drinking water intakes within 15 downstream miles (rivers) or 15 miles radius (lakes, bays, etc.). Provide information on population served. For multiple intakes (i.e. municipal system) provide information on the number of intakes, location of all intakes (regardless of 15 mile limit), average annual pumpage of each intake (regardless of 15 mile limit), and total population

served by system. Include information on all standby intakes.

There are no drinking water intakes within 15 miles downstream or within a 15 mile radius (lakes, bays, etc.) of the station (RIDEM, 1995a). The Cumberland Water District does have a pair of wells at the edge of the Blackstone River (Manville Wells #1 and #2). It is not known whether they are influenced by, or independent of, the nearby river surface water. (RIDEM, 1995a).

15. Provide information and location of intakes within 15 miles downriver (radius in lake or bay) that are used to irrigate 5 or more acres of commercial food or forage crops, or watering of commercial livestock, or ingredient in commercial food preparation, or supply for aquaculture, or supply for a major or designated water recreation area, excluding drinking water use.

There are no intakes within 15 miles downriver (radius in lake or bay) that are used for any of the above mentioned purposes. The Cumberland Water District does have a pair of wells at the edge of the Blackstone River (Manville Wells #1 and #2). It is not known whether they are under the influence of, or independent of, the nearby river surface water. (RIDEM, 1995a).

16. Is any surface water body 15 miles downriver (radius in lakes or bay) used for drinking water?

There is no surface body of water 15 miles downriver (radius in lakes or bay) that is used for drinking water. The Cumberland Water District does have a pair of wells at the edge of the Blackstone River (Manville Wells #1 and #2). It is not known whether they are under the influence of, or independent of, the nearby river surface water. (RIDEM, 1995a).

17. What is the average human food chain production (pounds per year) for each surface water body 15 miles downriver or 15 mile radius in lake?

According to telephone conversations with officials at the Rhode Island Division of Fish and Wildlife there are no records kept for the average human food chain production (pounds per year) for each surface water body 15 miles downriver or 15 mile radius in lake. (Aneptek, 1995i).

18. Within a 4 mile radius from the site and 15 miles downriver or radius in lake, identify all sensitive environments that exist. Provide original documentation (USF&W, Natural Heritage Database, State agencies, NOAA, etc.) and locate each by HRS distance ring. Note that there could be multiple sensitive environments within a sensitive environment.

A description of all sensitive environments that exist within a 4 mile radius from the site

are presented in Table G-2. According to a report submitted to Aneptek from the Department of Environmental Management of Rhode Island there are no lotic or lotic species occurring within the designated 15 mile downstream areas.

19. What is the linear frontage of all wetlands 15 miles downriver or 15 mile radius in lake?

The total linear frontage of wetlands along the 15 mile downstream pathway which includes the Woonasquatucket River Basin is 9.35 miles (NWI, 1975). Total linear frontage of wetlands along the 15 mile downstream pathway which includes the Branch River and Blackstone River Basins is 3.78 miles (NWI, 1975).

20. What is the location and number of persons residing, working, attending school or day care within 200 feet of each source?

Because of the close proximity of each AOC or source to one another, the numbers of persons residing, working, or attending school or day care within 200 feet of each source is nearly the same. Since a distance of 200 feet from each source is within the Station boundaries, or within the surrounding woods, the numbers of persons residing, working, or attending school or day care within 200 feet of each source are roughly the numbers of persons residing, working, or attending school or day care on the Station. There are no residential quarters on the Station and there is no school or day care facility on the Station. The number of full-time workers on the Station is approximately 150. This number expands to as much as 500 on those weekends during which drills are held.

21. Identify all terrestrial sensitive environments that exist on-site. Provide original documentation (USF&W, Natural Heritage Database, State agencies, NOAA, etc.) and locate each on a 7.5 minute topographical map. Note that there could be multiple sensitive environments within a sensitive environment.

There are no terrestrial sensitive environments existing on site. (RIDEM, 1995b)

22. For each source, choose one description from Table 8 that describes the accessibility to a human population. Provide complete documentation (i.e. engineering diagrams, photographs (originals) as to why the source meets that description and not any other in the Table.

There are three Areas of Concern (AOC) located at the site. The location of each is shown in Figure G-1. The site is located on the Rhode Island Air National Guard Station. Being a military installation the Station's perimeter is completely enclosed by a maintained fence with only two access gates. The immediate area outside of the fence is heavily wooded. AOC A lies entirely within this perimeter, AOC B lies partially outside the perimeter fence, and AOC C lies outside the station perimeter fence but is itself enclosed by a perimeter fence with only one access gate. Therefore for each of the

TABLE G-2

**SENSITIVE ENVIRONMENTS WITHIN FOUR MILES OF
NORTH SMITHFIELD ANG STATION**

HRS Distance (miles)	Sensitive Environments	Description	Distance
0 - 0.25	—	—	—
0.25 - 0.50	—	—	—
0.50 - 1.0	Blunders	1 state threatened species 5 species of state interest 1 species of concern	0.6 miles
1.0 - 2.0	Woonsocket Hill	1 endangered species	1.2 miles
	Slatersville Reservoir	1 species of interest	1.4 miles
2.0 - 3.0	Screech Hole	1 state endangered species 1 species of concern	2.8 miles
3.0 - 4.0	—	—	—

sources, the description from Table 8 which describes the accessibility to a human population is: AOC A: Surrounded by a maintained fence or combination of maintained fence and natural barriers. AOC B: Accessible, with no public recreation use, and AOC C: Accessible, with no public recreation use.

23. What is the total number of people in the following distance rings from source(s)?:

0-1/4 mile	30
1/4-1/2 mile	68
1/2-1 mile	298
1-2 mile	2087
2-3 mile	12,034
3-4 mile	<u>25,703</u>

Total: 40,220

Use 1990 Census data and/or actual house counts. Document how calculated.

The total number of people residing within the 4 mile radius was calculated by using information obtained in a telephone interview with the Rhode Island Department of Economic Development (Aneptek, 1995j), the 1990 census, and using house counts based on USGS topographical map (USGS, 1975).

24. For each source, choose one description from Table 9 that describes the gaseous containment. Provide complete documentation (i.e. engineering diagrams, photographs (originals) as to why the source meets that description and not any other in the Table. From Table 10, choose the appropriate description of each source type. For each source, choose one description from Table 11 that describes the particulate containment. Provide complete documentation (i.e. engineering diagrams, photographs (originals) as to why the source meets that description and not any other in the Table.

From Table 9, the best description of gaseous containment for each source is:

<u>Source</u>	<u>Description</u>
AOC A	Does not apply
AOC B	Does not apply

AOC C Does not apply

From Table 10, the best description of each source type is as follows:

<u>Source</u>	<u>Description</u>
AOC A	Contaminated soil
AOC B	Contaminated soil
AOC C	Contaminated soil

From Table 11, the best description of particulate containment for each source is:

<u>Source</u>	<u>Description</u>
AOC A	Uncontaminated soil cover > 1 foot and < 3 feet: Cover soil type resistant to gas migration.
AOC B	Uncontaminated soil cover > 1 foot and < 3 feet: Cover soil type resistant to gas migration.
AOC C	Uncontaminated soil > 3 feet:

There are no engineered particulate containment structures present for the AOC's listed above.

25. What is the location and area (in acres) of all wetlands within 4 miles of site?

The total acreage of all wetlands located within 4 miles of the site is 712. Approximately 533 acres lie within the Georgiaville/Chepachet RI Quadrangles, and the remaining 179 lie within the Blackstone, MA Quadrangle (NWI, 1975).

26. Contact EPA Regional Office immediately if any radionuclides are present or suspected at site and supply all radiological information known to date.

No radionuclides have been reported or suspected to be present at the Site.

27. For all of the above information, use primary data sources and supply 2 copies or specify where copies may be obtained.

Copies of primary data sources for all of the above information are included in the project file.

- 28. Have any removals or remedial actions taken place at site? If yes, then submit ALL information pertaining to action taken.**

On June 17, work began on the excavation of contaminated soils in two areas on site, designated Area 1 and Area 2 (see attachment to this Appendix). Work continued on June 19 and 22 1992. See attachment for all information regarding this action.

- 29. If information relevant to a question already has been provided to EPA, your answer may precisely cite the previous submittal by title, date, page and paragraph number rather than resubmit the information. To assist in your efforts, also enclosed is a copy of EPA's draft Preliminary Assessment Guidance.**

If information relevant to any of the above 28 questions has already been provided, it was noted in the answers given to those questions.

Notes:

NR - This surrogate standard is Not Required. Other versions of this test method may use this surrogate standard.
 Dil - This surrogate standard was diluted to below detectable levels due to concentrations of analytes in this sample.

Complete Surrogate Standard Names Listed by Analysis:

Pesticide Surrogate Standards:

Decachl = Decachlorobiphenyl

Dibutyl = Dibutylchloroendate

Tetrach = Tetrachloro-m-xylene

Volatile Surrogate Standards:

Bromofl = Bromofluorobenzene

1,2-Dichl = 1,2-Dichloroethane-d4

Toluene = Toluene-d8

Drinking Water Method 524 1,2-Dichl = 1,2-Dichlorobenzene-d4

Semivolatlile Surrogate Standards:

2-Fluor (1st) = 2-Fluorobiphenyl

Phenol- = Phenol-d6

2,4,6-T = 2,4,6-Tribromophenol

2-Fluor (2nd) = 2-Fluorophenol

Nitrobe = Nitrobenzene-d5

p-Terph = p-Terphenyl

Herbicides Surrogate Standard:

2,4-Dic = 2,4-Dichlorophenyl acetic acid

Petroleum Hydrocarbon Fingerprint Surrogate Standard:

2-Fluor = 2-Fluorobiphenyl

para-Te = para-Terphynyl

IDW-08	115224	GROUND WATER	114	101	55	52	88	70	64	94				

Notes:

NR - This surrogate standard is Not Required. Other versions of this test method may use this surrogate standard.

Dil - This surrogate standard was diluted to below detectable levels due to concentrations of analytes in this sample.

Complete Surrogate Standard Names Listed by Analysis:

Pesticide Surrogate Standards:

Decachl = Decachlorobiphenyl

Dibutyl = Dibutylchloroendate

Tetrach = Tetrachloro-m-xylene

Volatile Surrogate Standards:

Bromofl = Bromofluorobenzene

1,2-Dichl = 1,2-Dichloroethane-d4

Toluene = Toluene-d8

Drinking Water Method 524 1,2-Dichl = 1,2-Dichlorobenzene-d4

Semivolatle Surrogate Standards:

2-Fluor (1st) = 2-Fluorobiphenyl

Phenol- = Phenol-d6

2,4,6-T = 2,4,6-Tribromophenol

2-Fluor (2nd) = 2-Fluorophenol

Nitrobe = Nitrobenzene-d5

p-Terph = p-Terphenyl

Herbicides Surrogate Standard:

2,4-Dic = 2,4-Dichlorophenyl acetic acid

Petroleum Hydrocarbon Fingerprint Surrogate Standard:

2-Fluor = 2-Fluorobiphenyl

para-Te = para-Terphenyl

RE: Black Plain Hill
North Smithfield, RI

Dear Mr. Donovan,

Thank you for contacting the Rhode Island Natural Heritage Program for information regarding rare species and ecologically significant natural communities within a four mile radius and along a fifteen mile downstream pathway from the above-referenced site.

At this time, we are aware of several areas of rare species habitat within this radius. The distances of these habitats from the subject site, and the number of rare species in each status category for each habitat, are listed below. Please see the attached page for explanations of our state rarity ranks.

Screech Hole - 2.8 miles from subject site -
1 state endangered species
1 species of concern

Slatersville Reservoir - 1.4 miles from subject site -
1 species of state interest

Blunders - 0.6 miles from subject site -
1 state threatened species
5 species of state interest
1 species of concern

Woonsocket Hill - 1.2 miles from subject site -
1 state endangered species

Jeff Donovan
17 January 1995
Page Two

At this time, we are not aware of any lotic or lentic rare species occurrences along a downstream pathway from these sites.

Please feel free to call me if you have any questions.

Sincerely,

Joanne Michaud

Joanne Michaud
Data Manager/Environmental Planner
Natural Heritage Program

The status of each species is designated by letter codes as defined below:

(FE) Federally Endangered

(FT) Federally Threatened

(SE) State Endangered

Native taxa in imminent danger of extirpation from Rhode Island. These taxa meet one or more of the following criteria:

1. A taxon currently under review for listing by the U.S. Fish & Wildlife Service as Federally endangered or threatened. Those identified as C2 (Category 2) are taxa for which information indicates that proposing to list under the Federal Endangered Species Act is possibly appropriate, but for which sufficient data on biological vulnerability and threat are not currently available to support proposed rules.
2. A taxon with 1 or 2 known or estimated total populations in the state.
3. A taxon apparently globally rare or threatened, estimated to occur at approximately 100 or fewer sites range-wide.

(ST) State Threatened

Native taxa which are likely to become State Endangered in the future if current trends in habitat loss or other detrimental factors remain unchanged. These taxa meet one or more of the following criteria:

1. A taxon with 3 - 5 known or estimated populations.
2. A taxon with more than 5 known or estimated populations in the state, but especially vulnerable to habitat loss.

(SI) State Interest

Native taxa not considered to be State Endangered or Threatened at the present time, occurring at 6 - 10 sites in the state.

(C) Concern

Native taxa which do not qualify under other categories but are additionally listed due to various factors of rarity and/or vulnerability.

(SH) State Historical

Native taxa which have been documented for the state during the last 150 years but for which no extant populations are known. The year of documented occurrence is included.
